Computational physics

Metcalf, M.
Comment on a paper by Maley et al. 1

Martoňák, R., W. Paul and K. Binder
Monte Carlo simulation of crystalline polyethylene 2

Becciani, U., V. Antonuccio-delogu and A. Pagliaro
A work- and data-sharing parallel tree N-body code 9

van Vlimmeren, B.A.C. and J.G.E.M. Fraaije
Calculation of noise distribution in mesoscopic dynamics models for phase separation of multicomponent complex fluids 21

Califano, F.
A numerical algorithm for geophysical and astrophysical inhomogeneous fluid flows 29

Ristow, G.H.
Particles moving in spatially bounded, viscous fluids 43

Zhang, F.
Energy corrections in Hamiltonian dynamics simulations 53

Lobanov, Yu.Yu.
Deterministic computation of functional integrals 59

Najima, R. and Y. Kurihara
Complete tree level evaluation for the reaction $e^+e^- \to \nu_e \bar{\nu}_e W^+ W^-$ by an automatical amplitude generator 73

Homeier, H.H.H. and E.O. Steinborn
Comment on: A Gaussian quadrature for the optimal evaluation of integrals involving Lorentzians over a semi-infinite interval 77

Berblinger, M., Ch. Schlier and T. Weiss
Monte Carlo integration with quasi-random numbers:experience with discontinuous integrands 151

Chassapis, C.S. and T. Tsakalakos
Multidimensional optimization of a stochastic model for X-ray diffraction from superlattices 163

James, F., J. Hoogland and R. Kleiss
Multidimensional sampling for simulation and integration: measures, discrepancies, and quasi-random numbers 180

Jansen, K. and C. Liu
Implementation of Symanzik's improvement program for simulations of dynamical Wilson fermions in lattice QCD 221

Dikoussar, N.D.
Function parametrization by using 4-point transforms 235

Kalogeropoulos, T.E., Y.G. Saridakis and M.S. Zakynthinaki
Improved stochastic optimization algorithms for adaptive optics 255

Computer programs in physics

Kröger, M.
Optimization of classification trees: strategy and algorithm improvement 81

Ngo, D., G. Videen and P. Chýlek
A FORTRAN code for the scattering of EM waves by a sphere with anonconcentric spherical inclusion 94

Martin, V. and L.M. Robledo
Numerical and symbolic calculation of the multipole matrix elements in the axial and triaxial harmonic oscillator basis 113

Pöschl, W., D. Vretenar and P. Ring
Application of the finite element method in self-consistent relativistic mean field calculations 128

Accomando, E. and A. Ballestrero
WPHACT 1.0 – A program for *WW*, Higgs and four-fermion physics at $e^+ e^-$ colliders 270

Lemoine, D.
Optimal cylindrical and spherical Bessel transforms satisfying bound state boundary conditions 297

Velgakis, M.J., G.A. Baker, Jr. and J. Oitmaa
Integral approximants 307

Fritzsche, S. and C. Froese Fischer
REOS – A program for relaxed-orbital oscillator strength calculations 323

Sim, E. and N. Makri
Filtered propagator functional for iterative dynamics of quantum dissipative systems 335

Charlton, D.G., G. Montagna, O. Nicrosini and F. Piccinini
WWGENPV 2.0 – A Monte Carlo event generator for four-fermion production at $e^+ e^-$ colliders 355

Arter, W.
Book review: Probabilistic Methods in Applied Physics 149
